1) Connection to database (file persistence.xml)

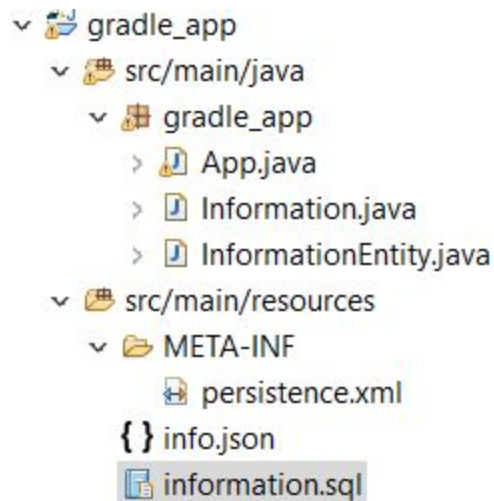

```
1<?xml version="1.0" encoding="UTF-8"?>
2<persistence xmlns="http://java.sun.com/xml/ns/persistence"
3            xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
4            xsi:schemaLocation="http://java.sun.com/xml/ns/persistence http://java.sun.com/xml/ns/persistence/persistence_2_0-1.xsd">
5    <persistence-unit name="JPAService" transaction-type="RESOURCE_LOCAL">
6        <provider>org.hibernate.jpa.HibernatePersistenceProvider</provider>
7        <properties>
8            <property name="hibernate.dialect" value="org.hibernate.dialect.HSQLDialect"/>
9            <property name="hibernate.hbm2ddl.auto" value="update"/>
10           <property name="hibernate.connection.driver_class" value="org.hsqldb.jdbcDriver"/>
11           <property name="hibernate.connection.username" value="SA"/>
12           <property name="hibernate.connection.password" value=""/>
13           <property name="hibernate.connection.url" value="jdbc:hsqldb:hsqldb://localhost/" />
14        </properties>
15    </persistence-unit>
16</persistence>
```

I wrote an automatic table generation:

```
<property name="hibernate.hbm2ddl.auto" value="update"/>
```

2)The data file is in the resources folder

3)Eclipse - run application
